

July 11, 2011

The Films on Demand collections provide unlimited, 24/7 access to more than 3,000 videos and 33,000 segments - all Closed Captioned. These videos cover topics in Humanities & Social Sciences, Business & Economics, Science & Mathematics and Health & Medicine to name a few. The video content can be linked with any course management system and used by faculty and students anytime, anywhere. The ability to create and share custom playlists has made this service especially popular among colleges with large commuter populations and/or online enrollments. The collections are dynamic, so any new videos we acquire are added to the resource automatically. Public performance rights are included.

Section 508 Compliancy

Infobase Publishing makes a concerted effort to ensure that our digital resources do not create a barrier to usage for individuals with disabilities. Our Digital Development Department maintains ADA compliance as one of its highest priorities. As a result, each of our platforms is constantly monitored for ADA compliance with the aim of continued improvement.

The Films On Demand streaming video platform addresses ADA compliance via providing closed captioning for our video titles and segments. All new titles/segments are captioned prior to being made available in our subject collections. We are in the process of addressing backlist titles that have not been captioned. Films On Demand collections currently boast a total of more than 37,000-closed caption segments.
